Max Kaiser

Backend & Systems Software Engineer

Zürich, Switzerland • hello@maxkaiser.io • +41 79 968 09 22 • www.maxkaiser.io

PROFILE

Backend and systems-focused Software Engineer with professional experience building web applications, APIs, and performance-sensitive systems across Go, C++, and TypeScript. Strong foundation in system design, performance optimisation, and clean architecture, comfortable working from database modelling through to backend feature delivery in Linux environments. Currently designing and building a production marketplace platform end-to-end as the sole engineer.

CORE TECHNICAL SKILLS

- **Backend & Systems:** Go, C++ (C++17/20), TypeScript (NestJS / Fastify), REST APIs, real-time services
- **Databases:** PostgreSQL, SQL, data modelling, schema evolution (Prisma)
- **Infrastructure & Tooling:** Linux, Docker, Redis, BullMQ, Git, CI-friendly workflows
- **Services & Integrations:** Stripe Connect, Clerk (auth), Sentry, WebSockets (Socket.IO)
- **Additional Languages:** Rust, C#, JavaScript, Lua
- **Engineering Practices:** Clean architecture, performance optimisation, maintainability, Agile

PROFESSIONAL EXPERIENCE

Software Engineer (C++ / Systems)

Roarington AG — Zürich Jul 2024 – Present

- Designed and implemented core systems in modern C++ with a strong emphasis on scalability, data flow, and performance.
- Built modular components following clean architecture principles.
- Profiled and optimised CPU-intensive systems — [improved <metric, e.g. frame time / throughput> by <X>%] — applying systems-level thinking to improve runtime stability.
- Worked closely with designers and engineers in an Agile production environment, balancing feature delivery with technical quality.

Software Engineer Intern (Backend / Go & C++)

Disney Research Studios — Zürich Jan 2024 – Jul 2024

- Built features for an internal Go web application used to manage and visualise technologies assigned to film productions.
- Implemented end-to-end functionality for assigning and managing technologies per production, covering backend logic and database interactions.
- Contributed REST-style backend endpoints supporting internal research workflows.
- Collaborated with researchers and engineers to evolve the data model as new technologies and relationships were introduced.
- Maintained and extended performance-sensitive C++ components used in internal research tooling, in a production Linux environment.

Software Engineer Intern

Lentii — Remote Aug 2023 – Dec 2023

- Implemented and refactored software features with a focus on maintainability and performance.
- Reduced technical debt by improving existing implementations and internal abstractions.

PROJECTS

Carrify — carrify.gg

Founder & Sole Engineer 2026 – Present

- Designing and building a managed game-boosting and coaching marketplace from the ground up, owning the full stack with the backend in TypeScript (NestJS / Fastify).
- Modelled the PostgreSQL schema with Prisma covering services, orders, users, and a financial ledger; implemented the order lifecycle as an explicit state machine.
- Built REST APIs and real-time buyer–booster chat using Socket.IO with a Redis adapter for horizontal scaling.
- Integrated Stripe Connect for marketplace payments, KYC, and booster payouts, and Clerk for authentication.
- Implemented background job processing and queues on Redis + BullMQ; containerised local development with Docker and set up Sentry for error monitoring.

EDUCATION

BSc Computer Science (Game Development Specialism)

University of London 2028

Bachelor of Business Administration (Marketing)

University of Westminster 2022

LANGUAGES

English (Native) • German (Fluent) • Italian (Intermediate) • Spanish (Intermediate)
