Max Kaiser

BACKEND & SYSTEMS SOFTWARE ENGINEER

London, UK • max.kaiser.dev@gmail.com • +41 79 968 09 22 • github.com/maxkaiser11
UK Pre-Settled Status (full right to work)

PROFILE

Backend and systems-focused software engineer with 3 years of professional experience building web applications, APIs and performance-sensitive systems across Go, C++ and TypeScript. Comfortable working from database modelling through to backend feature delivery in Linux environments, with a strong grounding in system design and performance optimisation. Currently completing a BSc in Computer Science and building Go web applications as sole engineer. Seeking an in-office backend engineering role in London.

CORE TECHNICAL SKILLS

Backend & Systems	Go, C++ (C++17/20), TypeScript (NestJS), REST APIs
Databases	PostgreSQL, SQL, data modelling and schema design (Prisma, sqlc, goose migrations), SQLite
Infrastructure & Tooling	Linux, Git, Docker, Fly.io, Vercel, CI-friendly workflows
Additional Languages	JavaScript, Rust, C#, Lua
Practices	Clean architecture, performance optimisation, maintainability, Agile
Spoken Languages	English (Native), German (Native), Italian (Intermediate), Spanish (Intermediate)

PROFESSIONAL EXPERIENCE

Software Engineer (C++) Jul 2024 – Present
Roarington AG, Zürich

- Developed gameplay features in C++ (Unreal Engine 5) for a 3D open-world racing game built around classic cars.
- Built features for interactive digital experiences, including a virtual museum for a major automotive brand.
- Built internal C++ tools adopted by the whole studio to support day-to-day development.
- Worked closely with designers and engineers in an Agile production environment, balancing feature delivery with technical quality.

Software Engineer Intern (Backend, Go and C++) Jan 2024 – Jul 2024
Disney Research Studios, Zürich

- Built the backend in Go for an internal web application used across the studio to allocate and visualise the technologies assigned to individual film productions.
- Implemented end-to-end functionality for assigning and managing technologies per production, covering backend logic, REST-style endpoints and database interactions.
- Evolved the data model alongside researchers and engineers as new technologies and relationships were introduced.
- Contributed to the jeri.io project.
- Maintained and extended performance-sensitive C++ components in a production Linux environment.

Software Engineer Intern Aug 2023 – Dec 2023
Lentii, Remote

- Implemented and refactored features across the stack, improving maintainability and reducing technical debt.
- Collaborated with a small engineering team in an early-stage product environment, contributing to both frontend and backend codebases.

PROJECTS

lolstats: League of Legends Stats Web App 2026 – Present
Sole engineer, github.com/maxkaiser11/lolstats

- Building a Go web app on the Riot Games API for player and match lookups, backed by PostgreSQL with goose migrations and sqlc-generated queries.
- Implemented authentication from scratch: bcrypt password hashing, hashed session tokens with expiry, and cross-origin request protection.

World of Warcraft Combat-Log Analyzer 2026
Sole engineer

- Built a Go backend that ingests and parses World of Warcraft combat logs and reports each player's DPS for every boss in an encounter.

Carrify: Game-Boosting & Coaching Marketplace 2026
Founder and sole engineer, carrify.gg

- Built a complete marketplace prototype end-to-end as sole engineer, with the backend in TypeScript (NestJS).
- Modelled the PostgreSQL schema with Prisma covering services, orders and users; built REST APIs for the core marketplace flows.

Twoinflow: Class Booking Platform 2025
Full-stack, production

- Developed and deployed a production booking web application in Go with SQLite persistence and session-based admin authentication, hosted on Fly.io.

EDUCATION

BSc Computer Science (Machine Learning & AI), *University of London, part-time (distance)* 2025 – 2028

Bachelor of Business Administration (Marketing), *University of Westminster* 2019 – 2022
